

# MULTIQUEST

A MULTIPLE CHOICE ASSESSMENT APPLICATION THAT PROVIDES MULTIPLE CHOICES FOR THE EXAMINER.

MultiQuest is designed as an automated stand-alone multiple choice examination application. It allows you to control everything from data entry to scoring and reporting.

Although MultiQuest is very simple to use and features a very familiar Windows-style interface, it is remarkably capable and is as comfortable handling large scale professional examinations as it is small tests.

## Question Styles

MultiQuest can be configured to read different types of answer sheets depending on the style of the assessment and the type of MCQs being used, for example:

- Single True/False
- Multiple True/False (e.g. 1 stem with 5 items)
- Single Best Answer (e.g. 1 from A,B,C,D or E)
- Extended Matching
- 'Certainty Based Marking' scales

## Exam Management

Examination administrators are completely free to define the overall structure of their assessments and are able to:

- Set up sub-tests within an examination
- Define an examination with multiple papers
- Define reports in keeping with the examination structure
- Set the pass mark
- Define grading schemes with break points for each grade
- Optional use of negative scoring for incorrect answers

## Scoring

Once the assessment is complete, the results are automatically read by a scanner, using the very latest Optical Mark Reading technology (OMR).

Get quick accurate scores for the candidate and also the opportunity to improve the assessment in a variety of ways.

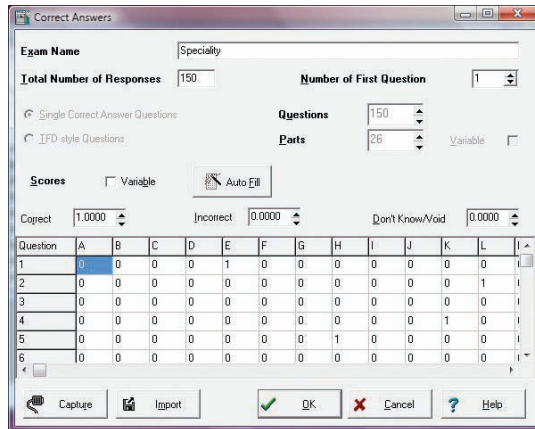

## Reporting

MultiQuest has a comprehensive reporting facility that enables users to perform key tasks. This information can be presented in a fresh, graphical style, which encourages administrators to examine it.

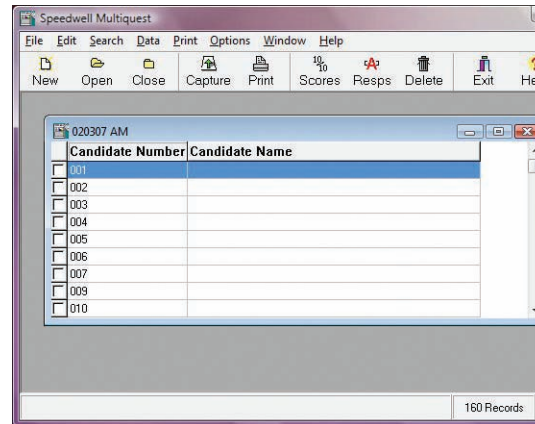

- Produce Pass/Fail reports in rank, name or candidate number order
- Measure the reliability of the assessment
- Evaluate the performance of individual questions
- Generate student feedback reports
- Provide exception reports (missing papers, absentees etc.)
